DETAILED ACTION

1. This office action is responsive to the request for continued examination filed on 02/03/2005.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 20 is rejected under 35 U.S.C. 102(b) as being anticipated by Vardaxoglou (WO/9400892), cited by applicant.
- 4. Vardaxoglou discloses, in figure 8, a waveguide comprising at least one outer surface 6 defining a waveguide cavity, at least one inner surface positioned within the waveguide cavity, the inner surface comprising frequency selective surface 5 having a plurality of frequency selective surface elements coupled to at least one substrate, see figures 1 and 2. Vardaxoglou also teaches that the frequency surfaces 5 are arranged to transmit at low frequency and reflect at high frequency, see page 5, lines 9-24.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/614,626

Art Unit: 2821

Claims 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vardaxoglou in view of Diaz et al (US Patent 6,512,494), newly cited.

Vardaxoglou, described above differs from the claimed invention because it does not disclose the specific permeability and permittivity of the substrate. Diaz et al disclose a frequency selective surface comprising a substrate having permeability and permittivity between 10 and 100, see column 7, line 64 through column 8, line 2. Since one of ordinary skill in the art would have recognized the benefits of resonating at multiple resonance frequencies, it would have been obvious to provide the FSS of Vardaxoglou with the substrate having high permeability and permittivity as taught by Diaz et al. Regarding claim 17, the frequency selective surface element comprising of concentric ring slots is well known in the art for radiating multiple of the wavelength, see the US patent 6,208,316. The grating lobe of the antenna is reduced when the spacing between adjacent elements of the FSS is inherent.

Allowable Subject Matter

Claims 1-15 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan Ho whose telephone number is (571) 272-1822. The examiner can normally be reached on M-F (8:00AM - 5:00PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don Wong can be reached on (571) 272-1834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
